Medical wigs × Latest technology × Natural fibers

**MADE IN
JAPAN**

* Hair transplantation is China

*A new type
of
medical wig*

All wigs are made from natural

fibers to ensure zero stress on the skin

"All wigs made from natural fibers" OneStep's vision for safe and secure wigs

The importance of each and every day remains the same as before.

What kind of quality is appropriate for people undergoing chemotherapy or suffering from alopecia?

In general wigs sold for "medical use," "synthetic fibers" such as nylon are used for the base material (the part that comes into direct contact with the skin). Synthetic fibers are used because they are stretchy, durable, and easy to transplant hair into. However, for those who have lost their hair due to chemotherapy and **have sensitive scalps, or those with atopic dermatitis or sensitive skin**, chemical fibers can be very irritating and can cause inflammation and worsen symptoms, so there are many people who cannot wear wigs or who wear them while enduring the discomfort. Therefore, **One Step is committed to using "natural fibers" and decided to "make wigs of safe quality that everyone can wear with confidence."**

Because the wigs come into direct contact with the skin, **we want to provide you with gentle wigs that are comfortable to wear every day and don't put a strain on the skin.**

We want you to be able to dress up even during treatment, enjoy your favorite hairstyle, and stay cheerful.

That is One Step's vision for safe and secure wigs.

Furthermore, **we strive to create products that are not only gentle on the skin, but also environmentally friendly, and have developed the industry's first medical wig made from organic cotton.**

*This is the industry's first wig made from organic cotton. (Research conducted by Tefco Co., Ltd. in August 2016)

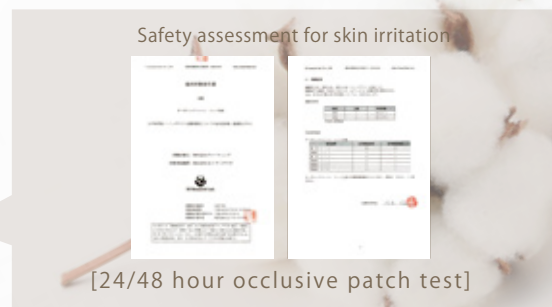

*We use organic cotton grown in cotton fields approved by GOTS certification agencies and using strict farming methods.

■ Proof of safety and security

Side effects from illness and medication can make the scalp more sensitive than you might think. Therefore, we tested it to a stricter standard than the JIS standard.

Safety and reliability were proven through 24/48 hour occlusive patch tests on models with sensitive skin only.

*This does not mean that skin problems will not occur in all people.

Medical wig "5Star®" award history

✦ 21st Fukuoka Design Award "Gold Award"

In November 2019, the company was awarded the Gold Award for its commitment to quality and for its contribution to society.

✦ 10th International Association for Universal Design IAUD Award 2020, Medical and Welfare Category "Bronze Award"

In December 2020, the product was awarded a bronze award in recognition of its ongoing improvements for wig users.

Other awards

- ✦ Social Products Award 2016 "Special Award (Story)"*1
- ✦ 10th Kids Design Award: Design that contributes to children's safety and security "Judges' Special Award"*2
- ✦ Hyogo Creative Business Grand Prix 2016 "Hyogo Prefecture Industry and Labor Department Director's Award"*3

Made in Japan for peace of mind

*Hair transplantation is China

No tape needed,
no shifting hairline

Organic Cotton Wigs

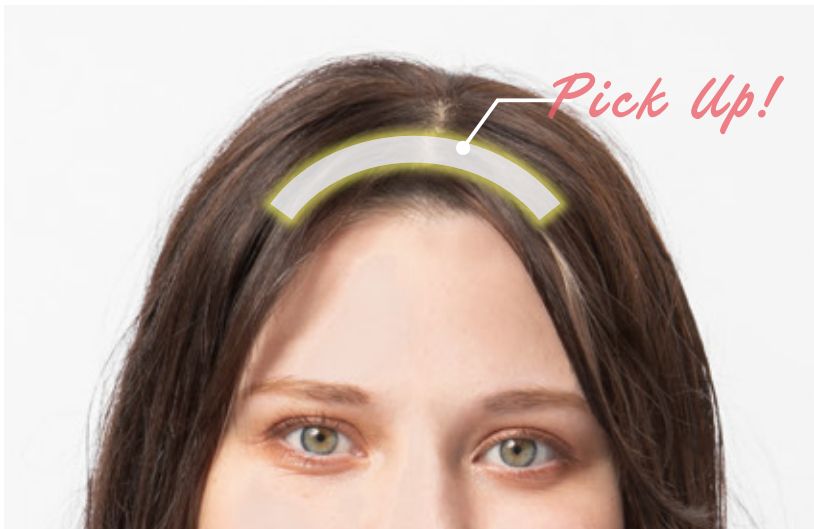

The evolution of organic cotton wigs

5Star® uses special silicone to fit perfectly to the front hairline.

It is a "new type of wig" that does not use double-sided tape and is designed to address hairline misalignment.

The secret to the perfect fit is "special silicone." No adhesives are used, and the silicone is made using our own proprietary technology that has passed skin safety tests.

A new sensation that fits perfectly around your hairline.

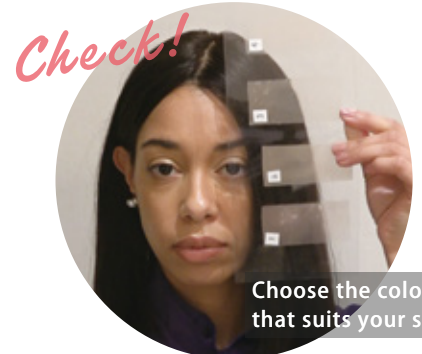

Conventional wigs have the problem of slipping off when moving around in everyday life.

The 5Star Wig eliminates the tightness caused by adjustable elastic bands, making it comfortable to wear, but we have pursued a new sense of comfort to further alleviate your concerns.

After repeated improvements, 5Star® uses special silicone around the hairline, eliminating concerns about the wig's hairline shifting.

You can order your hairline to match your skin color. Choose from 4 colors of special silicone.

*Fit may vary from person to person.
It may not stay in place for everyone.

This is a medical wig that focuses on natural appearance and comfort.

Official website: 5Star

5Star® has five features that anyone who uses it will find comfortable. It is a medical wig that is focused on softness, and pursues a natural look and comfortable fit.

"Medical wigs" that make full use of technology

1

— Commitment to cotton —
"Organic cotton" made from Sea Island seeds

The base fabric is made of organic cotton using Sea Island seeds. The cotton fibers are longer, lighter and softer than any other cotton, and when you touch the base fabric made from this ultimate cotton, you can feel its true softness.

*We use organic cotton that is grown in fields certified by GOTS certification bodies and under strict farming methods. It is a natural material that is environmentally friendly and safe.

Anti-cancer drug treatment For those with alopecia

made in Japan
*Hair transplantation is China

5Star

*Patented

Five never-before-seen features

2

— Pursuing the softness of the fabric —
Special knit fabric "Wig knit"

We have succeeded in creating a fabric specifically for wigs using the soft knit fabric used for underwear. Although it is knit, it is difficult to unravel and has a soft, gentle and gentle texture. This fabric is gentle on the skin and comfortable to wear, allowing you to experience a comfortable fit.

*This is the industry's first wig made from organic cotton knit fabric! [Based on research by Tefco Co., Ltd. as of March 2019]

3 (technology)

— No size adjustment required —
Special film "Techno Adjuster®"

The elastic bands used to adjust the size of the wig have been removed, eliminating the need for size adjustments.

A revolutionary special film has been adopted to address the issues of lack of stability caused by the tightness and twisting of elastic bands. The Techno Adjuster changes temperature (when it comes into contact with body heat) and has the same mechanical properties as human skin, so you can wear the wig comfortably without feeling any discomfort even when it comes into contact with your skin.

4 (technology)

— A new idea for filling the area around Bon no Kubo —
Special foam "Holefoam®"

A new idea that acts as a stopper to fill the area around the Bon no Kubo (a hollow in the tray). The part that touches the skin keeps it comfortable by changing the temperature (by touching body heat). It can also be expected to prevent the cushion from slipping off due to neck movements, which was a concern.

*1 The hollow area in the center of the back of the neck.

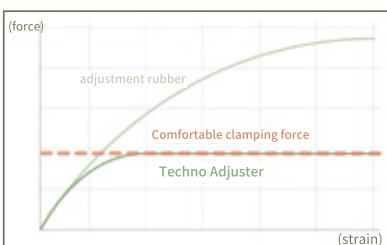

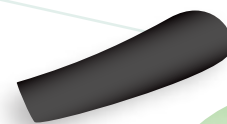

*Hole foam is optional.

An additional 3,300 yen (tax included)

5

— Specialized in preventing slippage —
Special silicone "adheres perfectly to the hairline"

We use special silicone to implant each individual hair at the hairline, achieving a natural, perfectly aligned hairline.

Techno Adjuster® stabilizes in a comfortable range against the pulling force of the rubber as the temperature changes.

It has passed the "deodorizing test" to ensure its quality.

* According to research by the Japan Consumer Products Quality and Technology Center

The synthetic fibers used in general wigs have low moisture absorption and tend to retain sweat, which makes odor a major issue. The natural fibers used in the lining of 5Star® wigs have excellent moisture absorption, easily absorb sweat, and do not retain odor.

*The images and illustrations are for illustrative purposes only.

*This does not mean that no one will experience tightness or slippage.

5Star® Standard Specifications

5Star® comes standard with high quality technology to achieve a natural look.

1 Anti-static treatment on base fabric.

The base fabric has been treated with an anti-static coating, which is expected to have a high static electricity removal effect. It is also expected to prevent the adhesion of dust, pollen, PM2.5, etc. The anti-static treated fiber has obtained the "Oeko-Tex® Standard 100 Class I*" certification.

2 Made from 100% high quality human hair, it feels different to the touch.

While the human hair used in regular wigs is treated with chemicals, One Step's high-quality human hair is made from high-quality extra virgin human hair that has not been dyed with chemicals.

This allows you to experience the natural shine and elasticity of the hair.

3 The roots and tips of the hair are transplanted in the same direction.

The advanced hair transplantation techniques of our expert craftsmen faithfully reproduce the natural texture of your hair, including the way the hair flows and stands up.

In addition, the hair is transplanted with the cuticle oriented in the same direction, resulting in a smooth feel.

*Oeko-Tex® has the world's highest safety standard and certifies that textile-related "materials" and "products" do not contain harmful chemicals. Class I is the strictest regulatory value required for textile products that come into contact with infants and young children up to 36 months of age, so it can be used safely by people with sensitive skin.

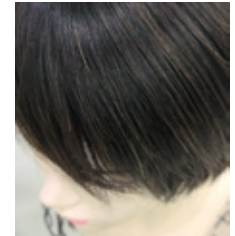

4 Just like the real thing! Natural artificial skin.

Advanced hair transplant technology reproduces the natural look of hair growing from the scalp. In addition, a wide artificial skin is used so that the part can be made on either the left or right side. The material is light and highly breathable.

5 We will cut your hair into the style you prefer.

We will propose a natural and beautiful style for each and every customer. At One Step, our experienced stylists carefully cut wigs while checking the overall balance and hair habits. Perms and coloring are also available.

You can also choose our new menu "Gray Hair Mesh Color (photo)"▲ which reproduces the natural look of gray hair. (Additional charge)

5Star® Pricing

The wig's cut and hair color are included in the price.

Choose from 4 sizes

*Sizes are approximate.

SSsize : 18.9~19.7inch Ssize : 20~21.3inch
Msize : 21.7~22.4inch Lsize : 22.9~23.6inch

Choose from 3 different lengths

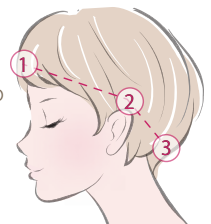

Points to consider when measuring wig size

◀ How to measure size

① Hairline of the front hair → ② above the ear → ③ Bon no Kubo
Wrap it around the circumference in the same way as you would a headband, and measure the length.

Bon no Kubo: the hollow in the center of the back of the neck

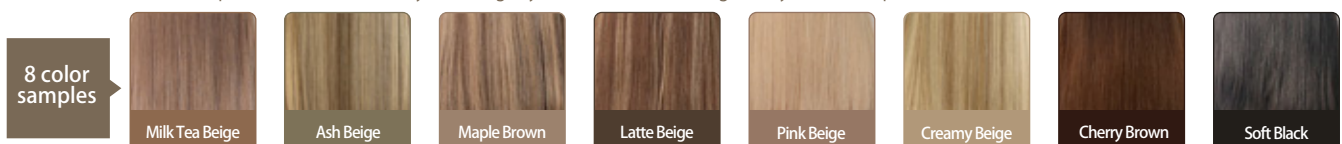

| Short (7.8 inch) | Semi Long (11.8 inch) | Long (15.7 inch) |
|------------------|-----------------------|------------------|
| \$ 1,580 | \$ 1,680 | \$ 1,980 |

*All prices include tax. *Prices include the cost of color and cut. *You can change to a custom-made service for an additional 33,000 yen on top of the listed price. *This price is for those undergoing chemotherapy or suffering from alopecia. Please note that for all other customers (based on our criteria), an additional 22,000 yen will be charged on top of the listed price.

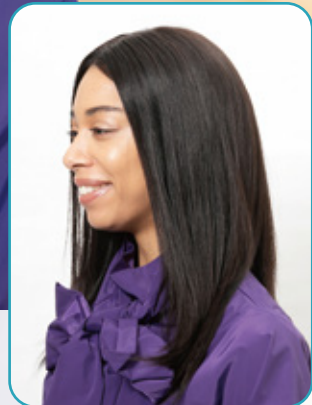

Choose your hair color

Choose from our extensive color chart or have your hair dyed to match your natural hair color. After your order is placed, we carefully dye your hair using professional colorants.

*The color shown is a sample. The actual color may differ slightly. *Limited colors change every month, so please check our website or contact us.

*The colors shown are samples. Actual color may vary slightly. *We can also dye your hair colors not listed on the chart. Feel free to inquire.

Pick up!

[wig net] Free from tightness with Fuwaty®

Features of Fuwaty®

This wig net is made of 100% organic cotton and is soft to the touch. It is seamless and smooth to the touch.

Conventional wig nets have a problem with tight elastic bands that can cause headaches. Fuwaty uses a special film instead of elastic bands, so it can be worn comfortably without any tightness. In addition to being used as an inner cap, it can also be used as a night cap because it is breathable.

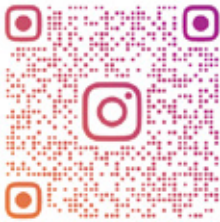

Medical Wigs Five Star® and Wig Net Fuwatee® use organic cotton grown in cotton fields certified by certification agencies and with strict farming methods. Since no pesticides or chemical fertilizers are used, these organic cotton products are environmentally friendly and reduce CO2 emissions significantly.
